Project Experience

Hotel Management system

The above project was created by me in 2nd pu using python and Database Management system which helped create a structured query for organizing the information on customers residing within the hotel

Student attendance system

The provided project was created by me and my team as a mini project In 1st sem of our engineering degree. The program was created using Multiple functions within c language and registered the students who Present or took admission in the designated institution

Online curriculum vitae

The resume currently being reads must have been downloaded from From my online portfolio the web app. It was made using python and Streamlit which is a fast api such that it handles all the backend framework hence making web development a bit more flexible
